

GB INSTRUCTION

DIGITAL DISPLAY TIME RELAY DMR201U, DMR202U

GENERAL

- Multifunctional time relay can be used for industrial equipment, lighting control, heating element control, motor fan control.
- With 20 delay modes, the delay range covers 0.1 seconds to 99 days.
- Function Features
 - 20 delay modes
 - 5 delay modes controlled by power supply
 - 13 delay modes controlled by signal
 - ON, OFF mode
 - Ultra wide delay range, 0.1 seconds- 99 days can be set.
 - Relay status is indicated by LED.
 - 1-MODUL, DIN rail mounting.

TECHNICAL PARAMETERS

	DMR201U	DMR202U
Function	20 functions	20 functions
Supply terminals	A1 A2	A1 A2
Voltage range	AC/DC 12-240V(5-60Hz)	AC/DC 12-240V(5-60Hz)
Rated burden	AC 0.09-36A/DC 0.05-1.7W	AC 0.09-36A/DC 0.05-1.7W
Voltage range	AC 230V (50/60Hz)	AC 230V (50/60Hz)
Power input	AC max.6W/1.3W DC max.6W/1.3W	AC max.6W/1.3W DC max.6W/1.3W
Supply voltage tolerance	±5%/±10%	±5%/±10%
Time range	0.1s-99H, ON/OFF	0.1s-99H, ON/OFF
Time setting	Key setting	Key setting
Time deviation	±1%	±1%
Repeat accuracy	0.2%-0.4% value stability	0.2%-0.4% value stability
Temperature coefficient	0.05%/°C at 20°C (±0.5%/°C at 86°F)	0.05%/°C at 20°C (±0.5%/°C at 86°F)
Output	1-SPDT	2-SPDT
Current rating	1x16A(AC) 2x16A(AC)	1x16A(AC) 2x16A(AC)
Switching voltage	250VAC/240V	250VAC/240V
Min. breaking capacity DC	500W	500W
Output indication	red LED	red LED
Mechanical life	1x10 ⁷	1x10 ⁷
Electrical life(AC)	2x10 ⁵	2x10 ⁵
Reset time	max.200ms	max.200ms
Operating temperature	-20°C to +55°C (°F to 131°F)	-20°C to +55°C (°F to 131°F)
Storage temperature	-35°C to +75°C (°F to 158°F)	-35°C to +75°C (°F to 158°F)
Mounting/DIN rail	On rail EN818/EN 60715	On rail EN818/EN 60715
Protection degree	IP40 for front panel/SPDT terminals	IP40 for front panel/SPDT terminals
Operating position	any	any
Overvoltage category	II	II
Pollution degree	2	2
Max.cable length(mm)	solid wire max.1.2-5m/2.5" with sleeve max.1.2-5m(AWG 12)	solid wire max.1.2-5m/2.5" with sleeve max.1.2-5m(AWG 12)
Dimensions	90*18*64mm	90*18*64mm
Weight	1-SPDT W40-0-29g/A30-60g	1-SPDT W40-0-29g/A30-60g
	2-SPDT W40-0-29g/A30-81g	2-SPDT W40-0-29g/A30-81g
Standards	EN 61812-1; IEC 60947-5-1	EN 61812-1; IEC 60947-5-1

FUNCTIONS DIAGRAM

Relay (Power ON)

When relay Un is powered on, the relay starts to delay, and the output contact is closed after delay. At the same time, after delay, the output contact is disconnected and the S control signal is invalid in this function mode.

Interval (Power On)
When relay Un is powered on, the relay output contact will be closed immediately and start delay. After delay, the output contact will be disconnected. If the delay time is extended and the relay Un is powered off, the output contact will be disconnected, and the S control signal is invalid in this function mode.

Repeat cycle (Starting Off)
When relay Un is powered on, the relay starts to delay. After delay T1, the output contact is closed. At the same time, after delay T2, the output contact is disconnected. In this way, the cycle delay is delayed until relay Un is powered off, and the S control signal is invalid in this function mode.

Repeat cycle (Starting On)
When relay Un is powered on, the relay is closed and begins to delay. After the delay T2, the output contact is disconnected. At the same time, after delay T1, the relay output contact is closed. In this way, the cycle delay is delayed until the relay Un is powered off, and the S control signal is invalid in this function mode.

Pulse generator(Power On)
When relay Un is powered on, the relay starts to delay. After delay T1, the output contact is closed. At the same time, after delay T2, the relay is disconnected and maintained. After relay Un is powered off, the output contact is disconnected. S control signal is invalid in this function mode.

On delay with external control
When the relay Un is in the power on state, when the S control terminal is connected, the relay starts to delay. After the delay, the output contact is disconnected. When the S control terminal is disconnected, the output contact is connected.

Off delay with external start
When the relay Un is in the power on state, when the S control terminal is connected, the relay will start. After the delay, the output contact is disconnected. During the delay process, the S control terminal will be connected and disconnected again, and the delay will be cleared and delayed again.

Pulse I with external start
When the relay Un is in the energized state, when the S control terminal is connected, the relay is closed, and the relay starts to delay. After the delay, the output contact is closed again, and the relay remains unchanged and continues to delay.

Pulse II with external start
When the relay Un is in the energized state, when the S control terminal is disconnected, the relay is closed, and the delay is cleared. After the delay T1, the output contact is disconnected. When the S control terminal is switched on and off again, and the delay T1 remains unchanged and continues to delay.

On/off delay with external control
When the relay Un is in the energized state, when the S control terminal is connected, the relay starts to delay. After the delay, the output contact is closed. When the S control terminal is disconnected, the relay starts to delay, and the output contact is opened after delay T2.

Latching relay
When the relay Un is energized and the S control terminal is connected, the relay output contact state changes.

Repeat cycle with external control (Starting Off)
When the relay Un is in the energized state, the S terminal is closed and the relay starts to delay. After the delay T1, the output contact is closed. At the same time, after delay T2, the relay output contact is disconnected. This cycle delays until the S terminal is disconnected.

Repeat cycle with external control (Starting On)
When the relay Un is in the energized state, the S terminal is closed, the relay is closed and begins to delay. After the delay T1, the output contact is closed. At the same time, after delay T2, the relay output contact is disconnected. This cycle delays until the S terminal is disconnected.

Pulse generator with external start
When relay Un is in the energized state, when terminal S is closed, the relay starts to delay. After delay T1, the output contact is closed. At the same time, after delay T2, the relay is disconnected.

Start-stop
Relay Un is in the energized state. When terminal S is closed, the relay starts to delay. After delay T1, the output contact is closed. At the same time, after delay T2, the relay is disconnected.

Double delay off with external control
Relay Un is in the energized state. When terminal S is closed, the relay is closed and starts to delay. After delay T1, the output contact is disconnected. When terminal S is disconnected, the relay is closed again and starts to delay. After delay T2, the relay is disconnected.

On delay I by external start
Relay Un is in the energized state. When the S terminal is closed, the relay starts to delay. After the delay T1, the output contact is closed and held. When the relay Un is disconnected, the delay is disconnected.

On delay II with external start
Relay Un is in the energized state. When terminal S is triggered, the relay starts to delay, and the output contact is disconnected after delay T1, when terminal S is triggered again, the relay opens and starts to delay, and the output contact closes after delay T2. When relay Un is off, the relay is off.

Always ON
Relay Un is in the energized state, the relay is closed, Un is in the de energized state, and the relay is disconnected.

Always OFF
Relay Un is energized or de energized, and both relays are disconnected.

EXAMPLES

NOTE: the use case is for reference only to understand the working principle of the relay. The actual application should be wired according to the actual needs.

ADJUSTMENT OF THE PRODUCT

Fast adjustment of delay time

Short press (M) to enter the interface of fast setting delay time, as shown below:

Short press (M) to adjust the parameter value, long press to realize rapid adjustment (when the value exceeds 99, it will start from 0).

the delay time T2 setting, this option is not available when the function mode is single delay time.

Short press (M) to adjust the parameter value, long press to realize rapid adjustment (when the value exceeds 99, it will start from 0).

Delay function setting

Long Press (M) 3 seconds to enter the function mode parameter setting interface, as shown below:

Short Press (M) to adjust the parameter value, long press to realize rapid adjustment, if there is no operation key within 60 seconds, it will automatically exit the setting mode. In the setting mode, long press (M) will enter the function mode 60 seconds to exit and save the settings.

DE BEIENUNGSANLEITUNG

ZEITRELAIS MIT DIGITALDISPLAY DMR201U, DMR202U

ALLGEMEINES

- Das multifunktionale Zeitrelais kann für Industrieanlagen, die Steuerung der Beleuchtung, Heizelemente, Motoren, Ventilator verwendet werden. Mit 20 Verzögerungsmodi reicht der Verzögerungsbereich von 0,1 Sekunden bis 99 Tage.
- Funktionen
 - 20 Verzögerungsmodi
 - 5 Verzögerungsmodi, die von der elektrischen Speisespannung gesteuert werden
 - Modus EIN, AUS
 - 13 signalgesteuerte Verzögerungsmodi
 - Obereiste Verzögerungsmodus, 0,1 Sekunden- 99 Tage einstellbar.
 - Relaisstatus wird durch LED angezeigt.
 - 1-MODUL, DIN-Railmontage

FUNKTIONSDARSTELLUNG

A: Verzögerung (Einschaltung)

Wenn das Relais Un eingeschaltet ist, startet das Relais die Verzögerung und der Ausgangskontakt schließt nach der Verzögerung T1. Nachdem das Relais A Stromlos ist, öffnet der Ausgangskontakt und das Steuerungs-S ist in dieser Betriebsart ungültig.

B: Intervall (Power-up)
Wenn das Relais Un eingeschaltet wird, schließt der Relaisausgangskontakt sofort und die Verzögerung beginnt. Nach einer Verzögerung T1 öffnet der Ausgangskontakt. Wenn die Verzögerung T2 nicht auftritt und das Relais Un
